

Where Do I find the Free Lesson Plans SMART Technologies offers?

I was told by someone at SMARTSolution Technologies, L.P. or directly by someone at SMART Technologies that there are free lessons on the SMART Technologies website, but how do I find them?

Step One:

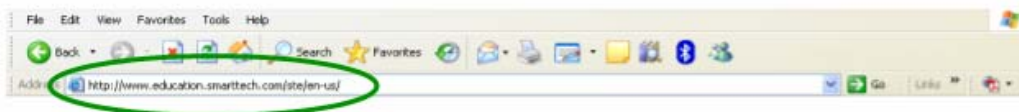

Double click on the icon to launch your Internet Browser. It will most likely be one of these choices: Internet Explorer, Mozilla Firefox, or Safari, but there are others.

Above are pictures of the 3 most common Internet Browsers.

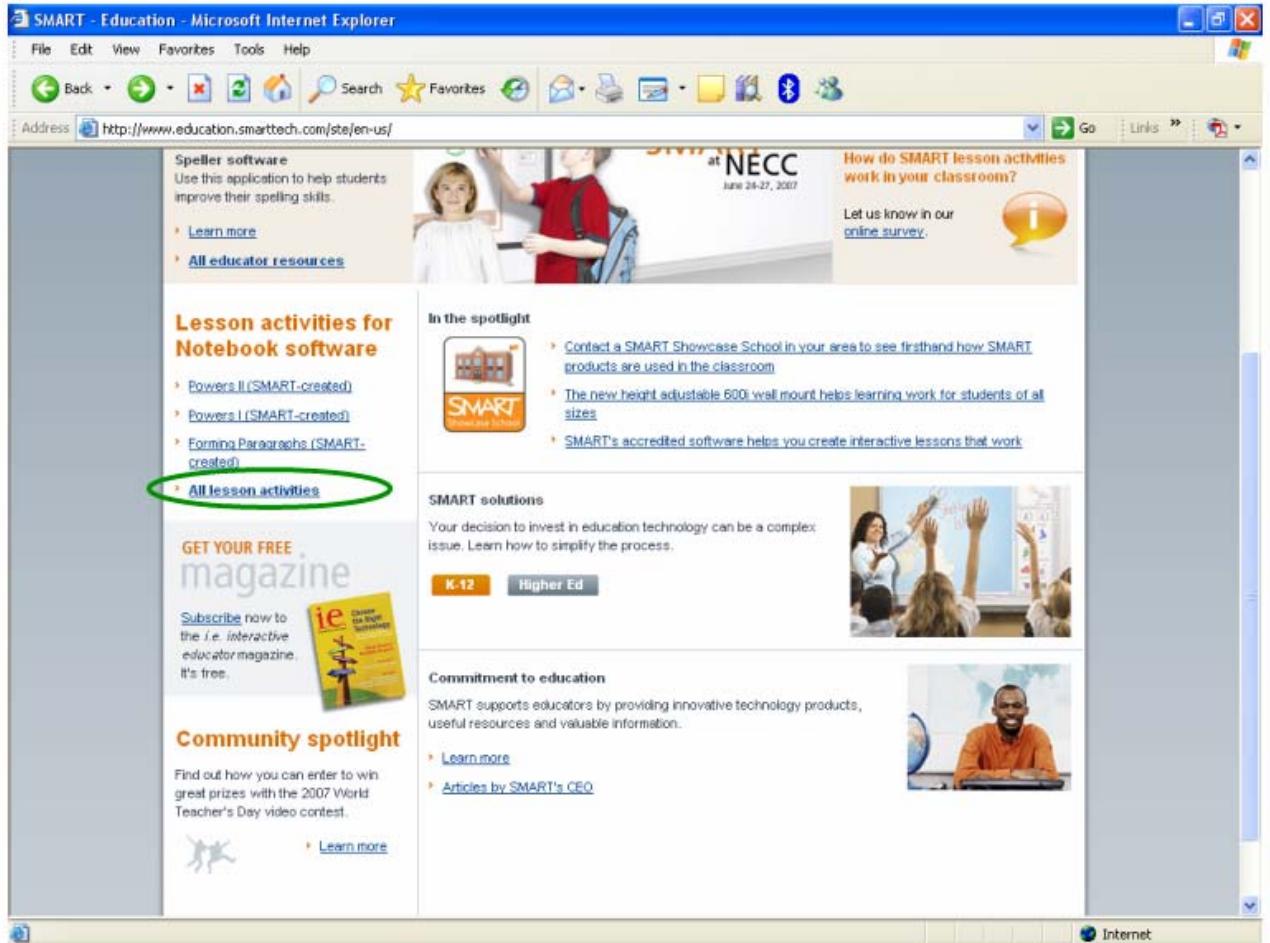

Step Two:

Type www.education.smarttech.com into your Internet Browser

Step Three:

You should have brought up a screen that looks like this:

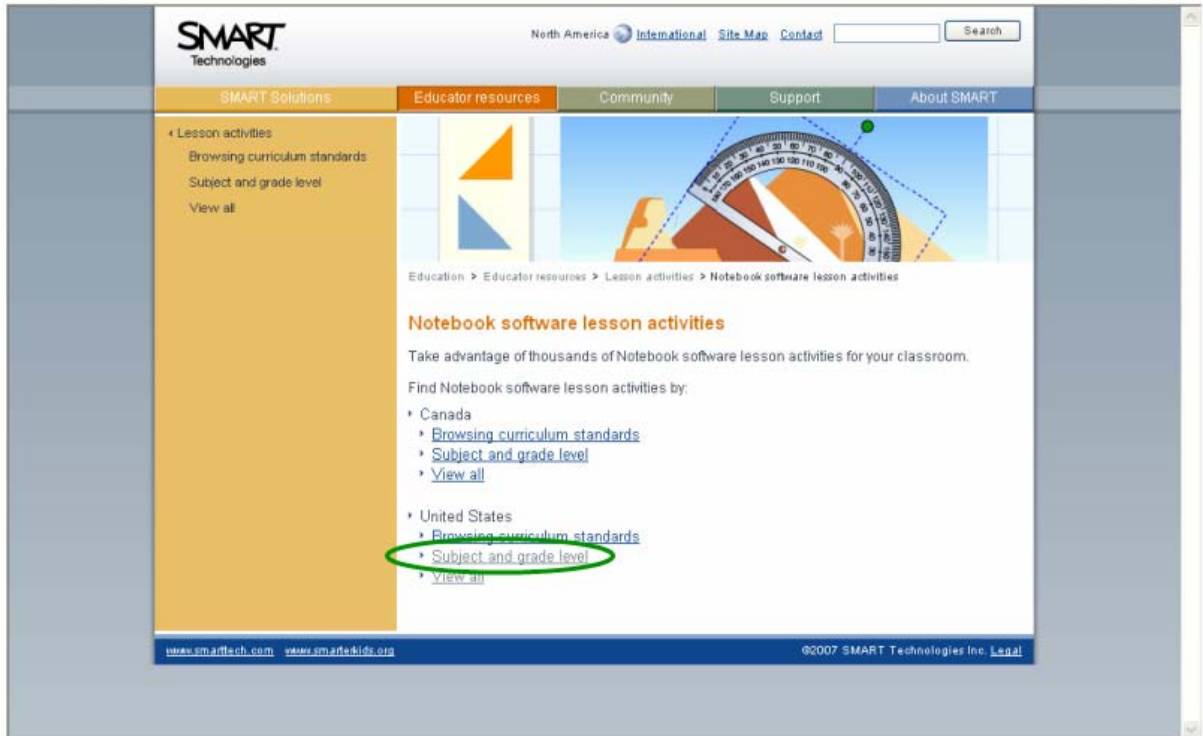

Click on the link on the left-hand side of the website that says “All Lesson Activities”

Step Four:

Choose which link you would like to use.

We will choose Subject and Grade Level under the United States heading:

The screenshot shows the SMART Technologies website interface. At the top, there is a navigation bar with links for "North America", "International", "Site Map", and "Contact", along with a search box. Below this is a secondary navigation bar with tabs for "SMART Solutions", "Educator resources", "Community", "Support", and "About SMART". The main content area features a large graphic of a protractor and a pencil. Below the graphic, the breadcrumb trail reads "Education > Educator resources > Lesson activities > Notebook software lesson activities". The main heading is "Notebook software lesson activities", followed by the text "Take advantage of thousands of Notebook software lesson activities for your classroom." and "Find Notebook software lesson activities by:". There are two main categories: "Canada" and "United States". Under "United States", there are three sub-links: "Browsing curriculum standards", "Subject and grade level", and "View all". The "Subject and grade level" link is circled in green. At the bottom of the page, there are website URLs "www.smarttech.com" and "www.smartkids.org", and a copyright notice "©2007 SMART Technologies Inc. Legal".

You should now be at a screen that looks like the one below:

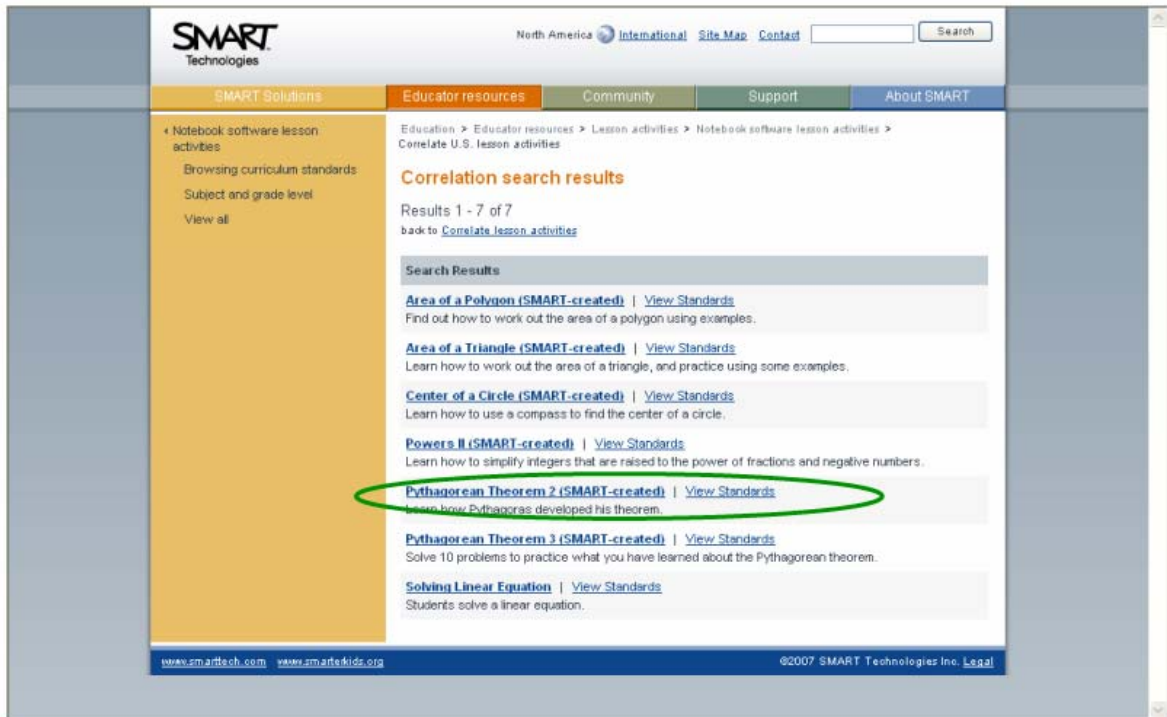

Step Five:

Now select a state, grade level and subject level and press on the “Search” button.

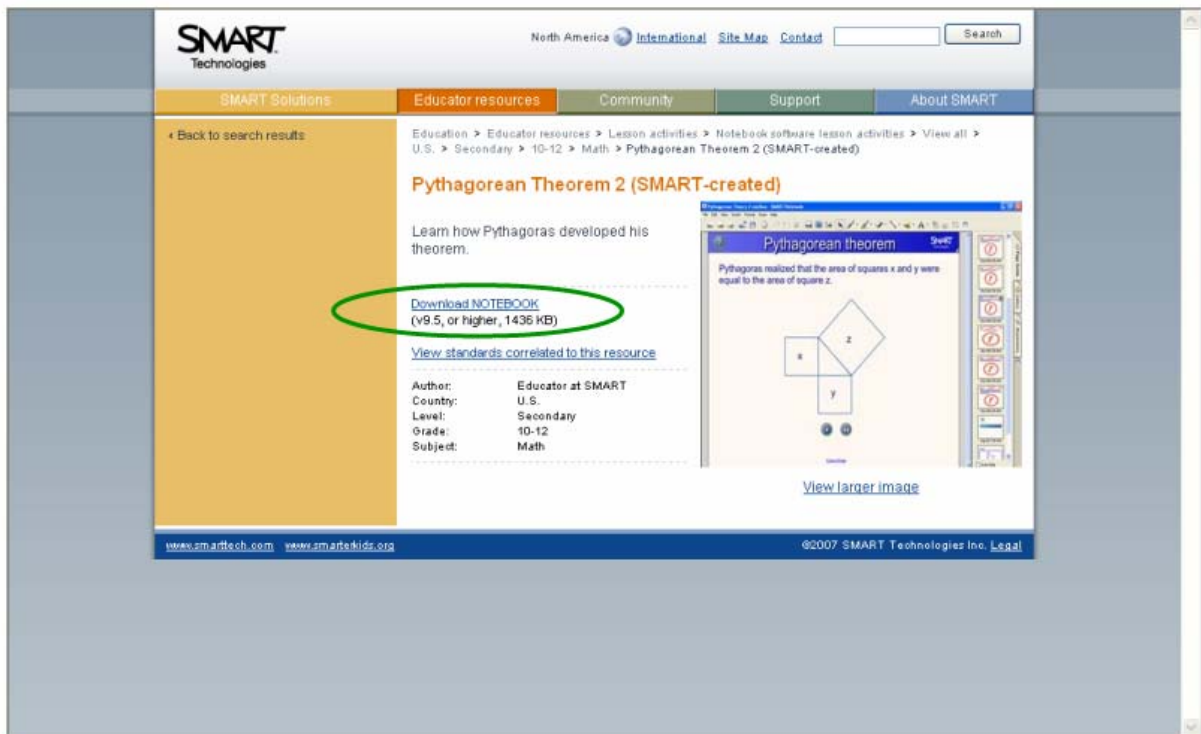

This should bring up a list of lesson activities that meet the Curriculum standards for your state at the grade level you need for that subject.

Step Six:

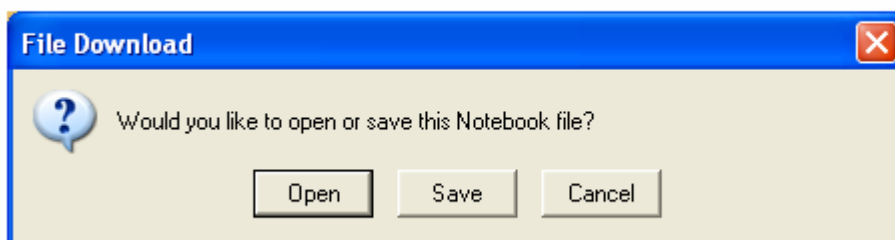

Click on the link for that lesson as shown with a green ellipse around it or click on the “View Standards correlated to this resource” if you would like more information about the lesson before you download it.

Step Seven:

You will get a window that asks you to “Open” or “Save” that lesson. I recommend saving the lesson. You can place it on your desktop or your “My Notebook Content” folder and later move it to a folder of your choice later.

Once the download is complete open the lesson.

You can use it as it is, add pages, or change the content to suit the information you need your students to learn.
